YOUR NAME

CYBERSECURITY STUDENT | INFORMATION SECURITY

[City, Country] | [Phone] | [Email] | [LinkedIn] | [GitHub] | [Telegram]

PROFESSIONAL SUMMARY

Second-year Information Security student at Belarusian State University of Informatics and Radioelectronics (BSUIR) with a strong academic foundation in cybersecurity, computer networking, operating systems, Linux, Windows, and C programming. Completed cybersecurity and networking training from Cisco Networking Academy and Stepik, covering cybersecurity fundamentals, networking, Cisco Packet Tracer, Linux command-line fundamentals, and C programming. Built an isolated virtual cybersecurity laboratory using Kali Linux, VirtualBox, and Metasploitable for practical vulnerability analysis and security testing. Seeking internship or junior opportunities in Security Operations (SOC), Security Analysis, Information Security, Network Security, Penetration Testing, or Application Security.

TECHNICAL SKILLS

Cybersecurity: Cybersecurity Fundamentals; Vulnerability Assessment; Security Analysis; OSINT Fundamentals; Digital Signatures; Security Models; Basic Incident Response Concepts

Networking: OSI Model; TCP/IP; IPv4/IPv6; DNS; DHCP; HTTP/HTTPS; Network Fundamentals; Basic Network Configuration

Operating Systems: Windows; Linux; Linux Command Line; Windows Command Line; Basic Windows Log Analysis

Programming: C; Algorithms and Problem Solving; Basic Data Processing; Program Logic and Implementation

Tools and Platforms: Kali Linux; Metasploitable; Cisco Packet Tracer; VirtualBox; VMware; Visual Studio Code

EDUCATION

Belarusian State University of Informatics and Radioelectronics (BSUIR) — Faculty of Information Security
B.S. / Bachelor's Degree in Information Security | 2025–2028 | GPA: 8.75/10 | Scholarship Recipient

Relevant Coursework: Information Security; Computer Networks; Programming and Algorithms; Operating Systems; Cybersecurity Fundamentals; Digital Signatures; Security Models

PROJECTS

Virtual Cybersecurity Laboratory | Personal Project | VirtualBox, Kali Linux, Metasploitable

- Built an isolated virtual laboratory for cybersecurity practice and vulnerability analysis.
- Configured Kali Linux and Metasploitable in a virtualized environment for controlled security testing.
- Practiced basic vulnerability assessment and analyzed system and network behavior in a laboratory setting.
- Developed practical understanding of virtualization, vulnerable systems, network interaction, and security testing workflows.

Vacancy Recommendation System | Academic Course Project | C

- Developed a course project in C focused on selecting and recommending suitable vacancies.
- Applied programming and algorithmic concepts to implement the application's core logic and data processing.
- Tested implemented functionality and documented the development process.

Network Fundamentals Laboratory | Academic / Training Project | Cisco Packet Tracer

- Completed hands-on networking exercises using Cisco Packet Tracer.
- Practiced basic network configuration and connectivity testing using OSI and TCP/IP concepts.
- Worked with IPv4/IPv6 addressing and studied DNS, DHCP, HTTP, and HTTPS in network communication.

Windows Security and Incident Response | Independent Training

- Studied Windows security and incident response fundamentals through structured cybersecurity training.
- Practiced basic command-line interaction and analysis of Windows system information and security-relevant logs.

CERTIFICATIONS & TRAINING

Introduction to Cybersecurity — Cisco Networking Academy — Certificate of Completion | August 2026
Networking Basics — Cisco Networking Academy — Certificate of Completion | August 2026
Getting Started with Cisco Packet Tracer — Cisco Networking Academy — Certificate of Completion | July 2026
Basics of C Programming. Tasks — Stepik — Certificate of Completion | December 2025
The Basics of Linux Terminal — Stepik — Certificate of Completion | August 2026
OSINT Introduction — Self-Directed Training — Completed | No certificate
