YOUR NAME

CYBERSECURITY STUDENT | PENTEST / RED TEAM

[City, Country] | [Phone] | [Email] | [LinkedIn] | [GitHub] | [Telegram]

PROFESSIONAL SUMMARY

Second-year Information Security student at Belarusian State University of Informatics and Radioelectronics (BSUIR) with a foundation in cybersecurity, networking, Linux, Windows, and C programming. Built an isolated virtual lab with Kali Linux, VirtualBox, and Metasploitable for hands-on vulnerability analysis and controlled security testing. Completed training in cybersecurity fundamentals, networking, Linux command-line operations, and C programming, and participated in introductory CTF exercises. Studying OSINT and practical security testing methods. Seeking internship or junior opportunities in Penetration Testing, Red Team, Vulnerability Assessment, or Information Security.

TECHNICAL SKILLS

Offensive Security Foundations: Vulnerability Assessment; Security Testing; Security Analysis; Cybersecurity Fundamentals; OSINT Fundamentals; Introductory CTF Practice

Security Tools and Platforms: Kali Linux; Metasploitable; VirtualBox; VMware; Cisco Packet Tracer; Visual Studio Code

Networking: OSI Model; TCP/IP; IPv4/IPv6; DNS; DHCP; HTTP/HTTPS; Network Fundamentals; Basic Network Configuration

Operating Systems: Linux; Linux Command Line; Windows; Windows Command Line; Basic Windows Log Analysis

Programming: C; Algorithms and Problem Solving; Basic Data Processing; Program Logic and Implementation

Security Concepts: Digital Signatures; Security Models; Basic Incident Response Concepts

EDUCATION

Belarusian State University of Informatics and Radioelectronics (BSUIR) - Faculty of Information Security

Bachelor's Degree in Information Security | 2025-2028 | GPA: 8.75/10 | Scholarship Recipient

Relevant Coursework: Information Security; Computer Networks; Programming and Algorithms; Operating Systems; Cybersecurity Fundamentals; Digital Signatures; Security Models

PROJECTS

Virtual Cybersecurity Laboratory | Personal Project | Kali Linux, VirtualBox, Metasploitable

- Built an isolated virtual laboratory for hands-on cybersecurity practice and vulnerability analysis.
- Configured Kali Linux and Metasploitable for controlled security testing in a virtualized environment.
- Practiced basic vulnerability assessment against an intentionally vulnerable system.
- Analyzed system and network behavior while working in a controlled laboratory environment.

Introductory CTF Practice | Independent Practice

- Participated in introductory Capture The Flag (CTF) exercises as part of practical cybersecurity learning.
- Applied foundational security and problem-solving concepts in hands-on challenge environments.

OSINT Introduction | Self-Directed Training

- Studied introductory OSINT concepts and methods for collecting and analyzing publicly available information.

Network Fundamentals Laboratory | Academic / Training Project | Cisco Packet Tracer

- Completed hands-on networking exercises using Cisco Packet Tracer.
- Practiced basic network configuration and connectivity testing using OSI and TCP/IP concepts.
- Worked with IPv4/IPv6 addressing and studied DNS, DHCP, HTTP, and HTTPS in network communication.

Vacancy Recommendation System | Academic Course Project | C

- Developed a course project in C focused on selecting and recommending suitable vacancies.
- Applied programming and algorithmic concepts to implement core logic and data processing.

CERTIFICATIONS & TRAINING

Introduction to Cybersecurity - Cisco Networking Academy - Certificate of Completion | August 2026

Networking Basics - Cisco Networking Academy - Certificate of Completion | August 2026

Getting Started with Cisco Packet Tracer - Cisco Networking Academy - Certificate of Completion | July 2026

Basics of C Programming. Tasks - Stepik - Certificate of Completion | December 2025

The Basics of Linux Terminal - Stepik - Certificate of Completion | August 2026

OSINT Introduction - Self-Directed Training - Completed | No certificate
